

Rasal

ID #061

SUMARIZED INDEX CARD

Downloaded from Iberian Evaporite Structure DataBase

GENERAL INFORMATION

Structure type	Evaporite-cored anticline
Deformed/Undeformed	Deformed
Geological Setting	Southern Pyrenees, External Ranges
Outcropping/buried	Partially buried
Evaporite unit/s name	El Pont de Suert Fm.
Evaporite unit/s age	Upper Anisian and Carnian-Rhaetian (Middle-Upper Triassic)
Evaporite unit/s origin	Marine
Classif. (Hudec and Jackson, 2009)	Thrust piercement
Classif. (Jackson and Talbot, 1986)	Salt anticline
Other comments	Structural and stratigraphic origin related to the Gúrga thrust. Central External Sierras show a set of N-S to NW-SE anticlines, perpendicular to the structural trend of the Pyrenees, that become younger and smaller westwards (Pico del Águila, Bentué de Rasal, Gabardiella, Rasal; see i.e. Vidal-Royo, et al., 2013)

STRATIGRAPHY AND STRUCTURE

Evaporite unit/s composition	Shale-Marlstone-Gypsum-Anhydrite-Halite
Post-evaporite and pre-kinematic unit/s	Upper Cretaceous (Adraén Fm., limestones) ; Palaeocene (Garumian, Tremp Fm., mudstone, siltstone and sandstone) ; Lutetian (Guara Fm., limestones rich in foraminifera)
Syn-kinematic unit/s	Bartonian-Early Priabonian (Arguis Fm., marly siltstones) ; Middle Priabonian (Belsuá-Atarés Fm., sandstones, conglomerates) ; Late Eocene-Early Oligocene (Campodarbe Fm., sandstones)
Post-kinematic unit/s (or post-evaporite desposition when undeformed)	Late Oligocene-Miocene (Uncastillo Fm., conglomerates), Quaternary
Age of evaporite flow or deformation (when deformed)	Eocene to Oligocene
Flow or deforming triggering mechanisms	E-W shortening related to the displacement of the South Central Pyrenean Unit
Halokinetic structures	Joint sets / Normal faults / Thickness variations / Progressive unconformities

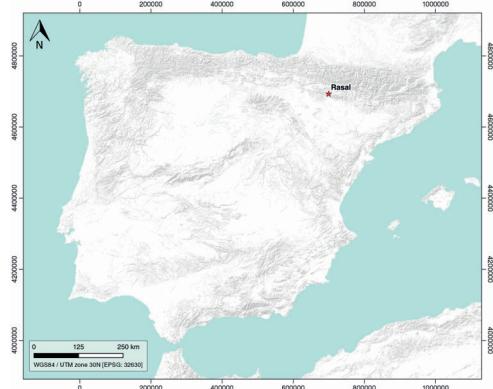

SUB-SURFACE DATA AVAILABILITY

Available borehole data	Yes
Available seismic data	Yes
